COMPANY PROFILE

GENERAL INFORMATION

Kolomaka Solutions (Pty) Ltd, a Level 2 B-BBEE company, was established in 2017 and provide services to municipal, industrial, and corporate clients.

Our main focus areas are:

- High water pressure cleaning (sewer jetting)
- Vacuum suction services (super sucker) for the removing of silt and sludge from sewer pump stations and various structures within waste water treatment works.
- Pumping of water and sewage/sludge by means of portable and trailer mounted pumps.
- CCTV inspections of large and small pipe systems and condition reporting.
- Water supply by means of water tankers.
- Horticultural services - Maintenance and equipment hire.
- Chemical disinfecting (Covid-19) of large, small, indoor and outdoor areas.

The company is owned and managed by:

Me. Zondi Manyika - N6 Business Management. (Contract Manager)
Mr. Adriaan Eksteen - N. H. Dip. Mechanical Engineering (Technical Manager)
Mr. Frans Pietersen – N. H. Dip. Civil Engineering (Business Development Manager)

This management team has operational experience of more than 50 years and our teams as well as their supervisors are extensively experienced in the municipal and commercial environments with specific focus on operation and maintenance activities.

We employ our own personnel, thereby ensuring quality of work and timeous allocation of resources.

Kolomaka Solutions is known for:

PROVIDING A PROFESSIONAL SERVICE
REASONABLE RATES
BUILDING LONG TERM CUSTOMER RELATIONSHIPS

SEWER SYSTEMS

High water pressure jetting- and vacuum type suction equipment is used for:

- Clearing of sewer pipe line blockages caused by sand, stones/rocks, fat deposits, foreign objects, chemical deposits etc.
- Removal of sludge and sediment from pump stations and waste water treatment works.

High pressure jet machines

Large sewer jet machine working

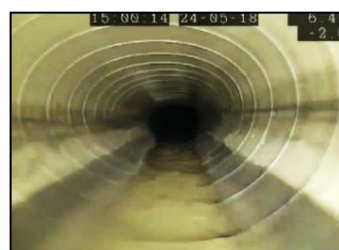

Emptying of blocked sewer manhole with venturi pump to remove foreign materials from sewer manhole

"Mini-jet" working.

Before and after of a 110 mm Ø pipe line.

INDUSTRIAL CLEANING

Vacuum suction truck (Super Sucker)

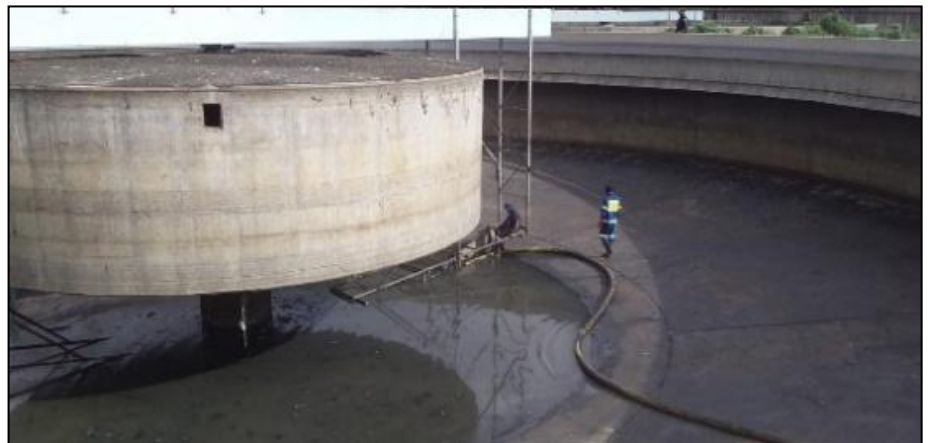

Silt and sludge being removed from sewer pump stations and large septic tanks.

Crust and sediment build-up removed from clarifiers.

Mud spillage clean-up.

STORM WATER SYSTEMS

Low flow rates and the build-up of sand and refuse in storm water systems results in the blocking of these systems. This is cleaned by means of high pressure water jetting, vacuum suction and manual removal of sediment.

Box- and pipe culverts being cleaned

Completely sand-clogged storm water inlet. Inlet structure being cleaned and pipe line jetted.

WATER PUMPS

Draining of flooded areas or excavations

SEWAGE/SLUDGE PUMPS

Dewatering/pumping of sewage or water. Pump sizes available: 75 mm (3") to 150 mm (6")

WATER SUPPLY

Water supply to ground level water tanks and reservoirs in high rise buildings by means of a high-pressure water pump fitted to a 6 000 lt. water truck.

HORTICULTURE SERVICES

(Full service/equipment rental)

CCTV INSPECTIONS

(50 to 500 mm diameter pipes)

- Locate and identify faults on problematic pipe sections.
- Determine if new infrastructure was correctly installed.
- Condition assessment of old and new pipes.

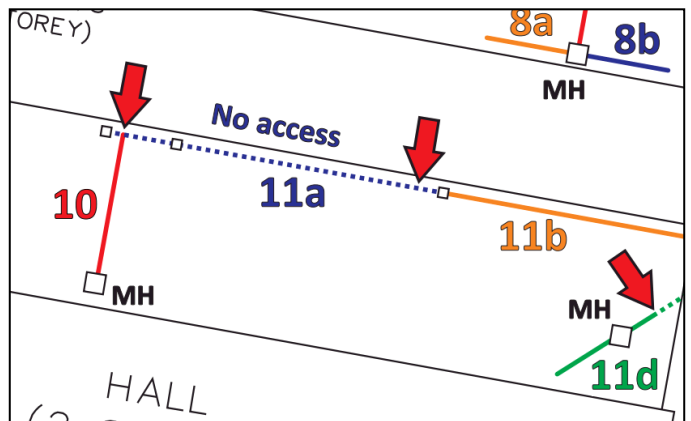

Push rod camera system

Misaligned joint at 18.4m
